Report # 20186

Attn: Harry Eisenbaum

A bottle of Gonicoll adhesive, manufactured in Europe, was examined to determine whether or not the labeling conforms to standards established by the Federal Hazardous Substances Act and by ASTM D-4236.

The product is a non-flammable acrylic adhesive in a water base. No organic solvents are present.

Under normal conditions of use, as described in the directions on the container, no chronic health hazards should exist for users.

Based on my thirty five years of professional experience, I believe this product will not present chronic health hazards to users. To conform to standards set forth in ASTM D-4236, the statements "keep out of reach of children" and "do not take internally" should be added to the label, as well as "conforms to ASTM D-4236".

This conclusion is based on the knowledge that, when properly used, there is no direct contact of the product with the skin. If there is contact with the skin, the solvent (water) will evaporate quickly, leaving a film on the skin which can be easily removed. There should be no absorption through the skin.
