Talc ^a	14807-96-6	238-877-9	up to 2.16%	-

^a Assessment of the product, was based on the assumption that the talc used in the product contains <0.1% asbestos fibers. If this is not the case, reassessment of the product is required.

The other ingredients in the product are either considered non-hazardous or are below their respective GHS cut-off values/concentration limits in the final product and were therefore not disclosed in the SDS.

It should be noted that the product may contain crystalline silica (particles of respirable size) (CAS No. 14808-60-7), carbon black (CAS No. 1333-86-4) and/or titanium dioxide (CAS No. 13463-67-7) which may be hazardous when inhaled. Given the nature and physical form of the product (*i.e.*, liquid ink) airborne respirable particles would not likely be released from the product and therefore the hazards is not relevant to the product.

This SDS was prepared under the assumption that several polymers contained in the final product are present as fully reacted/cured, high-molecular weight, and highly stable polymers with negligible residual monomers present (<0.1%). If this is not the case, reassessment of the product is required.

	Specific Concentration Limit	Multiplying-Factor	Acute Toxicity Estimate
